THE INNOVATIVE PERGOLA

SINTESI

THE INNOVATIVE PERGOLA

Maximum elegance: The cover is guided inside the side guide rails and the mechanics thus disappears in the particularly slim structure.

Highest reliability: The structure is made out of aluminium and steel and guarantees easy mounting and high system functionality.

Practical details: The motor is placed in a box and the gathered cover is 20% lower than comparable models.

Sophisticated technical solutions: When retracted, the rain shelter is a perfect protection for the cover against weathering. Water drainage at a minimum inclination angle of 7° (modifiable depending on the dimensions). Maximum inclination angle 18°. Multiple modules can be combined. The unit is available for wall mounting, ceiling mounting or as a free-standing structure.

- Patented moving of the cover profiles in between the guide rails
- Rain shelter made of PVC
- Patented drip-catcher system
- Standard colours for the frames according to HELLA Colour worlds
- The cloth profile colour matches the cover
- Standard cover: OPATEX PRO (water-resistant and shading PVC fabric)
Other covers (SOLTIS W96) available at a surcharge
- Accessories available upon request:
LED lighting integrated in the cover profiles
- Size limits for a single unit
maximum width x maximum projection:
6000x5110 mm or 5500x7000 mm
- Upon request integration of vertical blinds (TERRA SIDE and TERRA SIDE M)
